

HOW TO HANG

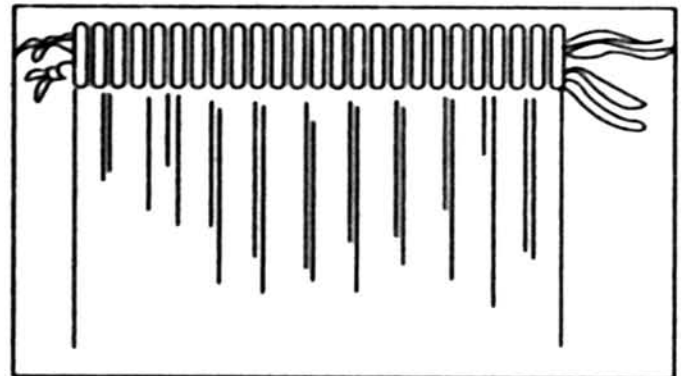

Lie curtain face down on a flat surface. Place lining on top of curtain, right side up.

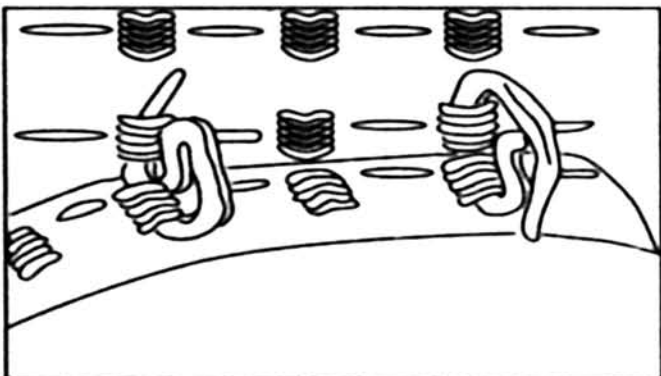

If curtain track is fitted with hook gliders, attach them to appropriate hook position on curtain tape. Then, insert a standard curtain hook into lining tape, pull through ring at the foot of the hook glider, so downward arm of the curtain hook lies over face side of lining.

If using standard curtain hooks, insert hook into lining tape and then curtain tape, select the right hook position for curtain pole or track.

Unpick cords at one end of both curtain and lining and knot securely. Unpick cord at opposite end, evenly gather tape until required curtain width is reached. Surplus cord should be tied closely to edges of tape to hold curtain in position. Tie a loop that can be easily undone when cleaning.

Pull curtain hook towards you so the downward arm of the hook lies over the face side of the lining.
